Re: Petition of Fouce Amusement Enterprises for
Reconsideration, MM Docket 87-268

Dear Mr. Caton:

On Friday, June 13, 1997, Fouce Amusement Enterprises filed a Petition for Reconsideration with the Commission in the above-captioned proceeding. Enclosed please find a fully executed original and fourteen copies of the Engineering Statement of Cohen, Dippell and Everist, P.C., which was attached to the Petition for Reconsideration as Exhibit 1. Please associate the enclosed substitute Exhibit 1 with the original and all copies of the Petition.

If you should have any questions, please contact this office.

Very truly yours,

John I. Stewart, Jr.

Engineering Statement
KRCA(TV), Riverside, CA

Page 1

This engineering statement has been prepared on behalf of Fouce Amusement Enterprises, Inc. (Fouce) in support of its Petition for Reconsideration of the FCC's *Sixth Report and Order* in MM Docket No. 87-268, in the matter of Advanced Television Systems and Their Impact upon the Existing Television Broadcast Service adopted by the Federal Communications Commission ("Commission"). Fouce is currently licensed to operate NTSC station KRCA, Channel 62, Riverside, California. The transmitting facility for KRCA is located on the Sunset Ridge Electrical Park overlooking Los Angeles, California and the surrounding area.

KRCA has authorized this firm to conduct studies and review the various aspects of the *Sixth Report and Order* as it applies to KRCA. This study was conducted on the impact of the *Sixth Report and Order* on KRCA's current NTSC service area and the interference which could result to existing service by new digital operations and the service replication by the assigned digital television ("DTV") operation.

In Table 1 of Appendix B to the *Sixth Report and Order*, the Commission allocated DTV Channel 69 (800-806 MHZ) with 175 kW average power to KRCA at Sunset Ridge. As discussed below, use of Channel 69 for DTV broadcasting from Sunset Ridge is highly inappropriate due to harmful interference that is predicted between DTV Channel 69 and adjacent channel Land Mobile Operations in the band 806-812 MHZ.

Background.

In the *Sixth Further Notice* the Commission made proposals for protecting against possible interference between DTV stations and land mobile operations. This issue was considered at some length in Section E., Land Mobile Sharing, of the *Sixth Report and Order*. In large part the FCC dealt with concerns related to the sharing of UHF channels 14-20 in 13 urbanized areas, the Gulf of Mexico offshore region, and Hawaii. The FCC concluded that its proposed minimum cochannel and adjacent channel separation distances between DTV and existing land mobile operations on channels 14 to 20 are appropriate for avoiding interference and ensuring the operation of both DTV and land mobile services. The minimum cochannel and adjacent channel separation distances adopted were 250 km and 176 km respectively.

However, no similar separation distances were adopted regarding potential interference between DTV operations on Channel 14 and Channel 69 and land mobile operations in the adjacent 6 MHZ band below Channel 14 and the adjacent 6 MHZ band above Channel 69. This is quite unfortunate because the potential for interference between these DTV operations and the adjacent land mobile operations is as great as the potential interference related to land mobile operations in the shared channels 14-20 in the 13 urbanized areas.

COHEN, DIPPELL AND EVERIST, P. C.

Engineering Statement
KRCA(TV), Riverside, CA

Page 3

Potential of Interference between KRCA, Channel 69 and LM Operations.

DTV Channel 69 which was allotted to KRCA extends from 800-806 MHZ. As shown in Section 90.613 of the FCC rules, the spectrum 806-824 MHZ is allocated to land mobile services for mobile and control frequencies. The base station transmitting frequencies related to these mobile and control frequencies are allocated 45 MHZ higher in the 851-869 MHZ spectrum. The channels available for assignment to land mobile stations are 25 kHz wide beginning at 806.0125 MHZ, only 12.5 kHz above the band edge of channel 69 and well within the out-of-band mask for Channel 69.

As shown in Appendix A of this Statement, there are numerous land mobile operations in the Los Angeles area which utilize the spectrum from 806-812 MHZ. Therefore the potential for interference to KRCA DTV transmissions from mobile and control stations assigned to this spectrum is significant. Moreover, the input receive frequencies for the base stations associated with these mobile and control stations are in the band 806-812 MHZ. It is particularly noteworthy in Appendix A that there are numerous base stations using 806-812 MHZ receive frequencies that are approximately collocated on Sunset Ridge with KRCA. Calculations demonstrate that the potential for harmful interference to the mobile and control stations received by these land-mobile base stations is significant. For example, the following calculations were performed for the receive frequency of 806.0875 MHZ used by a base station located on Sunset Ridge:

COHEN, DIPPELL AND EVERIST, P. C.

Engineering Statement
KRCA(TV), Riverside, CA

Page 4

KRCA Average Power	175 kW	(52.4 dBk)	(82.4 dBm)
Min Mask Attenuation	46.005 dB		
Power Density in 25 kHz LM CH	12.6 dBm		

For the 811.7875 MHZ land mobile channel, the calculations indicate that the power density in 25 kHz is -10.7 dBm. The remaining receiver frequencies for the band 806-812 MHZ used on Sunset Ridge are distributed between these two extremes.

While path attenuation losses between KRCA and the base stations on Sunset Ridge will further attenuate the interfering signals, such losses are at a minimum due to the close proximity of KRCA¹. Therefore, all receivers on Sunset Ridge operating in this adjacent band will be subjected to serious harmful interference. Due to their close proximity to KRCA, it is also anticipated that interference to receive frequencies above 812 MHZ is likely. Such interference can include direct interference, receiver desensitization, spurious receiver responses, conducted interference, etc. The typical receiver sensitivity is in the -100 dBm range or better. Obviously, the disparity in these numbers is sufficient to make any further consideration of a Ch. 69 DTV operation for KRCA not good engineering practice.

¹It is estimated that the path attenuation to the land mobile receiver location on Sunset Ridge is between 84 dB and 80 dB. Therefore, without considering gain characteristics of the receiving antenna, the potential interfering signal from KRCA to the receivers is estimated to be within -71 dBm to -90 dBm for 25 kHz, depending upon frequency.

COHEN, DIPPELL AND EVERIST, P. C.

Engineering Statement
KRCA(TV), Riverside, CA

Page 5

Steps to eliminate interference are not believed to be practical. For example, even a power reduction of 20 dB by KRCA to an average power of 1.75 kW would not be sufficient to significantly reduce the potential for interference to land mobile services. In addition, as KRCA's average power is reduced, the potential interference to KRCA's service from mobiles and control stations is increased. Direct interference and conducted interference from energy in the DTV sideband cannot be solved by outboard filtering at the land mobile receiver inputs. Additionally, filtering on the inputs of receivers reduces the performance of the receivers.

Fouce has considered moving its planned DTV operations to Mt Wilson. However, as shown in Appendix A of this Statement Channel 69 is no more usable at Mt Wilson than it is at Sunset Ridge due to a large number of land-mobile operations with receivers in the band 806-812 MHZ. Moreover, the potential interference to KRCA's Channel 69 transmissions from Mt Wilson from mobile and control stations would remain as great as that discussed for Sunset Ridge.

Clearly the only recourse is identification of a replacement DTV channel for Channel 69. It will facilitate the allotment of a DTV channel to KRCA as well as the allotment of DTV channels in general to the Los Angeles area if it is assumed that KRCA will initiate DTV operations from MT Wilson rather than Sunset Ridge where its NTSC operation is presently located. Such collocation will provide greater flexibility by

COHEN, DIPPELL AND EVERIST, P. C.

Engineering Statement
KRCA(TV), Riverside, CA

Page 6

eliminating some of the potential interference conflicts that exist related to DTV operations from Sunset Ridge.

KRCA attended all the regional broadcast caucus meetings. It requested changes (among which was a change to Mt. Wilson) for its facilities in that forum. To this date, KRCA has not received any response.

For these reasons, it is requested that the Commission amend the DTV Table in Table 1 of Appendix B of the *Sixth Report and Order* in order to specify a DTV channel that is not encumbered with the potentially fatal flaws discussed in this Statement.

EVALUATION CONCERNS

Existing KRCA service is complemented in outlying areas by cable. It is not certain how the Commission procedures for the implementation of DTV operations for the transition period will identify and protect these augmented current KRCA NTSC service areas.

There is presently difficulty in assessing KRCA's coverage areas because the full details of the Commission's implementation of the Longley-Rice model are not available. New Section 73.622(d) states that these details are available in OET Bulletin No. 69, which has not yet been issued.

There are a number of issues concerning the implementation of the Longley-Rice model and other related studies that are important considerations when assessing the results

COHEN, DIPPELL AND EVERIST, P. C.

Engineering Statement
KRCA(TV), Riverside, CA

Page 7

of the FCC's calculations for individual stations. Such issues include the confidence factor used in the studies, the size of the individual cells studied and whether these sizes are appropriate for some terrain conditions, the manner of selecting the centroids for population calculations, etc.

It is recognized that the FCC had to assume implementation criteria for the country as a whole, even if individual situations may exist where other criteria might be more appropriate. For this reason and because OET Bulletin 69 is not yet available, the Commission is encouraged to adopt a flexible mode in dealing with individual allotment problems that are identified in the new DTV allotment table after the new rules and the DTV Table of Allotments go into effect.

Without full knowledge of the Commission's calculation methodology for service and interference and the DTV frequency assignments prevents KRCA from making critical independent evaluation of what impact any DTV operation may have on its NTSC current service.

BORDER ISSUE

The Report and Order indicates that negotiations are underway regarding Mexico. These negotiations have a direct impact on the DTV assignments for southern California. Therefore, KRCA's DTV assignment faces uncertainty until the U.S.-Mexican DTV coordination is finalized.
